Summary of findings for the years 2008 and 2009

Gross farming income

Gross farming income (GFI) earned by the commercial farming sector was R95 224 million in 2008 and R119 355 million in 2009. The GFI figures reflect a growth of 25,3% between 2008 and 2009. A detailed composition of GFI by farming activity between the two years is provided in Table 2. It can be observed from Figure 1 that the income generated from all categories of farming activities recorded an increase in 2009. The highest percentage increase was recorded for income earned from field crops (40,5%), followed by horticulture (23,0%) and animals (21,5%).

However, the contribution to GFI of the different types of farming activities, by proportion, remained almost the same in 2008 and 2009 (see Table 2).

Figure 1 – Gross farming income by type of product

Current expenditure

The total current expenditure incurred by the commercial farming sector was R65 827 million in 2008 and R86 616 million in 2009. Figure 2 shows the major contributors towards the total current expenditure for both years. It can be seen that all the major contributors towards total current expenditure recorded an increase in 2009 compared with 2008.

Among the major current expenditure items, fertilisers purchased and stock, poultry and aquaculture feed registered the highest percentage increases of 43,5% and 38,1% respectively.

Figure 2 – Current expenditure according to major contributors

Farming debt

The total farming debt among the operators in the commercial farming sector in 2009 was estimated at R63 473 million, an increase of 24,7% compared with 2008. As illustrated in Figure 3 and Table 7.2, the largest lenders to the commercial farming sector in both 2008 and 2009 were commercial banks and private persons.

Figure 3 – Distribution of farming debt by type of creditor

Capital expenditure

The total capital expenditure in the commercial farming sector amounted to R7 839 million in 2008 and R10 485 million in 2009. This amounted to an increase of 33,7% between the two years. Figure 4 and Table 4 show that expenditure on new assets was the largest constituent of capital expenditure.

Figure 4 – Distribution of capital expenditure

Employment

The number of people employed in the commercial farming sector increased by 4,3%, from 814 524 in 2008 to 849 782 in 2009. The employment trends between the two years are shown in Figure 5. Detailed employment figures for the two years are provided in Tables 8 and 9. The number of full-time employees increased by 3,1% from 446 085 in 2008 to 459 901 in 2009, whereas the number of casual and seasonal employees increased by 5,8% from 368 439 in 2008 to 389 881 in 2009.

Explanatory notes

Introduction

Statistics South Africa (Stats SA) conducted two agricultural surveys in South Africa on commercial farming units in 2008 and 2009. In both surveys a sample of 15 000 farming units was drawn from Stats SA's Business Register (BR) which contained a total of 64 162 farming units in 2008 and 66 606 farming units in 2009. The frame was adjusted by removing all the enterprises below the 0,5% percentile turnover, and the 2008 and 2009 frames were adjusted to 37 010 and 44 308 farming units respectively. The BR is based on the income tax (IT) and value added tax (VAT) databases of the South African Revenue Service (SARS). All enterprises are legally bound to register for IT and/or VAT. Enterprises registered in the taxation system are included on the BR, and hence were given a chance of selection in the sample for the survey.

This statistical release contains information regarding:

- Income and expenditure items for the financial year;
- Employment as at 28 February 2008 for the 2008 survey and employment as at 28 February 2009 for the 2009 survey;
- Employees' remuneration for the financial year;
- Losses during the financial year;
- Farming debt as at 28 February 2008 for the 2008 survey and farming debt as at 28 February 2009 for the 2009 survey; and
- Book value of assets at the end of the financial year.

Reference period

- The questionnaires for *Agricultural Survey 2008* were completed for the financial year of the enterprise which ended on any date between 1 March 2007 and 28 February 2008, according to the usual reporting schedule of the enterprise. The *Agricultural Survey 2008* period will be referenced as 2008 in the report.
- The questionnaires for *Agricultural Survey 2009* were completed for the financial year of the enterprise which ended on any date between 1 March 2008 and 28 February 2009, according to the usual reporting schedule of the enterprise. The *Agricultural Survey 2009* period will be referenced as 2009 in the report.

Purpose of the survey

The agricultural surveys collect data on the commercial agricultural sector and its results are vital for benchmarking the gross domestic product (GDP) and its components, production and price indices, annual and short-term statistical series, and for comparisons within and between industries.

Users of the agricultural survey include:

- Price statisticians, particularly in refreshing the commodity basket of producer price indices;
- Policy advisers in government for monitoring the performance of industries and their contribution to the South African economy, and for evaluating the effectiveness of industry policies;
- Industry associations monitoring trends on their own and competing or complementary industries in order to inform their members of market changes; and
- Individual businesses using the data to analyse their performance relative to their industry.

Scope and coverage

The agricultural surveys for 2008 and 2009 cover statistics of enterprises mainly engaged in:

- Growing of crops, market gardening and horticulture (SIC 111);
- Farming of animals (SIC 112);
- A combination of the above (mixed farming) (SIC 113);
- Hunting, trapping and game propagation, including related services (SIC 115) only in 2008;
- Production of organic fertiliser (SIC 116) only in 2008; and
- Fish hatcheries and fish farms (SIC 132).

The following categories are excluded:

- Agricultural and animal husbandry services, except veterinary activities (SIC 114);
- Forestry and related services (SIC 121);
- Logging and related services (SIC122); and
- Ocean and coastal fishing (SIC 131).

Data in respect of agricultural smallholdings such as nurseries, vegetable gardens, flower farms and dairy farms are included in this release only in those cases where the products were intended for sale.

Classification by industry

The 1993 edition of the *Standard Industrial Classification of all Economic Activities* (SIC), Fifth Edition, Report No. 09-09-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 *International Standard Industrial Classification of all Economic Activities* (ISIC) with suitable adaptations for local conditions. Each enterprise is classified to an industry which reflects its predominant activity.

Statistical unit

The surveys’ data were collected at farming unit level. A farming unit consists of one or more farms, smallholdings or pieces of land, whether adjacent or not, operated as a single unit and situated within the same province.

Size groups

The enterprises are divided into four size groups according to turnover as recorded on Stats SA’s BR. The size group stratification used in the survey was adopted from the Department of Trade and Industry’s 2003 cut-off points. The size groups are indicated in Table A.

Table A – Cut-off points by size groups for the Agricultural Surveys 2008 and 2009

Size group	Turnover 2008	Turnover 2009
1	Turnover ≥ R5 million	Turnover ≥ R5 million
2	R3 million ≤ Turnover < R5 million	R3 million ≤ Turnover < R5 million
3	R500 000 ≤ Turnover < R3 million	R500 000 ≤ Turnover < R3 million
4	R200 000 ≤ Turnover < R500 000	R154 533 ≤ Turnover < R500 000

Survey methodology and design

The surveys were conducted by post, fax, telephone, email and personal visits. A sample of approximately 15 000 enterprises was drawn using stratified simple random sampling for both years. The enterprises were first stratified at three-digit level according to the SIC and then by size of enterprises. All large enterprises (size groups 1 and 2) were completely enumerated. Turnover as recorded on the BR was used as the measure of size for stratification.

Weighting methodology

For those strata not completely enumerated, the weights to produce estimates are the inverse ratio of the sampling fraction, modified to take account of non-response in the survey. Stratum estimates are calculated and then aggregated with the completely enumerated size groups 1 and 2 to form the total estimates. These procedures, which are in line with international best practice, are described in more detail on the Stats SA website at www.statssa.gov.za/publications/publicationsearch.asp

Relative standard error

Data presented in this publication are based on information obtained from a sample and are, therefore, subject to sampling variability; that is, they might differ from the figures that would have been produced if the data had been obtained from all enterprises in the agricultural industry in South Africa.

One measure of the likely difference is given by the standard error (SE), which indicates the extent to which an estimate might have varied by chance as only a sample of enterprises was used. The relative standard error (RSE) provides an immediate indication of the percentage errors likely to have occurred due to sampling, and thus avoids the need to refer to the size of the estimate.

Table B – Variables in the agricultural industry within 95% confidence limits: Agricultural Survey 2008

Variable	Lower limit	Estimation	Upper limit	Relative standard error

Casual employees (number)	371 608	389 881	408 155	2,4

Comparability with the previous surveys

It should be noted that the information published in this statistical release is not comparable with the information collected for the 2005 and 2006 surveys. The 2005 and 2006 surveys covered only large-scale (size groups 1 and 2) enterprises, whereas surveys 2008 and 2009 additionally include estimations for the smaller enterprises (size groups 3 and 4). This release is in many aspects comparable with Agricultural Censuses 2002 and 2007.

Response rate

A sample of 15 002 farming units was drawn from the BR (37 010 farming units) for the Agricultural Survey 2008, of which 11 260 responded, constituting a response rate of 75,1%. The response rate in terms of BR turnover was 89,2%. The total outstanding enterprises amounted to 3 742 and were treated as active units.

In the 2009 survey, a sample of 15 018 farming units was drawn from the BR (44 308) of which 11 151 responded, constituting a response rate of 74,3%. The response rate in terms of BR turnover was 87,2%. The total outstanding enterprises amounted to 3 867.

Table D – Response rate for the Agricultural Surveys 2008 and 2009

Item	2008	2009
	Number	Number
Frame	64 162	66 606
Adjusted frame	37 010	44 308
Sample	15 002	15 018
Responded	11 260	11 151
Response rate	75,1%	74,2%

Rounding-off of figures

Where necessary, the figures in the tables have been rounded off to the nearest final digit shown. There might therefore be slight discrepancies between the sums of the constituent items and the totals shown.

Abbreviations and symbols

BR	=	Business Register
DTI	=	Department of Trade and Industry
GDP	=	Gross domestic product
GFI	=	Gross farming income
IT	=	Income tax
0	=	More than nil but less than 500
SARS	=	South African Revenue Service
Stats SA	=	Statistics South Africa
VAT	=	Value added tax
-	=	Figures not available

Glossary

Farmer: The individual, partnership, close corporation, company or other enterprise that operates a farming unit for their own account; or the manager, foreman or other person to whom the control of the farming unit was entrusted.

Farming unit: Any unit on which one or more of the following farming operations are carried out for commercial purposes:

- Cultivation in the open air or under cover of field crops, vegetable plants, fruit or flowers;
- Operation of a tea, coffee or sugar plantation;
- Breeding of livestock, poultry, game or other animals, including freshwater fish, furred animals and trade in livestock; and
- Production of milk, wool, mohair, eggs or honey.

Type of employment

- '*Permanent employees*' are employees who are employed on a permanent basis with benefits, such as leave.
- '*Casual and seasonal employees*' include occasional and day labourers, e.g. shearers, reapers and fruit-pickers, but exclude contractors and their employees.

Gross farming income: Gross farming income as reported by the farmer includes income earned from agricultural products sold, but excludes other income. In this release, agricultural products are divided into field crops, horticultural products, animals and animal products.

- '*Field crops*' include cereals, oil seeds, fodder crops, etc.
- '*Horticultural products*' include vegetables, fruits, nuts, etc.
- '*Animals*' include livestock, poultry, game, aquaculture and all other animals.
- '*Animal products*' include milk, eggs, wool, etc.

Other income: An income which is derived from services rendered, leasing of farming equipment, salaries, pensions, rent on land, interest and dividends received, agri-tourism and farm-based retail stores.

Current expenditure: Expenditure incurred in farming operations during the financial year in respect of the farming unit as reported by the farmer. These expenses include seed stock, poultry feeds, fertilisers, fuel, packing material, electricity, interest paid and all other operating expenses. Railage and rented transport are also included with the relevant purchases.

Farming debt: This includes all financial obligations incurred in respect of normal farming activities, such as mortgages, loans and credits received from organisations such as banks, cooperative societies and private persons. Debt in respect of other business enterprises is not included. Particulars regarding farming debt are based on data submitted by the respondents.

General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data whenever they process, apply, utilise, publish or distribute the data; and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division
 National Library of South Africa, Cape Town Division
 Natal Society Library, Pietermaritzburg
 Library of Parliament, Cape Town
 Bloemfontein Public Library
 Johannesburg Public Library

Eastern Cape Library Services, King William's Town
 Central Regional Library, Polo wane
 Central Reference Library, Nelspruit
 Central Reference Collection, Kimberley
 Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

Electronic services

A large range of data is available via on-line services, diskette and computer printouts. For more details about our electronic data services, contact (012) 310 8600 / 8390 / 8351 / 4892 / 8496 / 8095.
